

YOUR PUPPY'S SHOT SCHEDULE

HE WOULD DO ANYTHING FOR YOU!

Ask your vet today about the right vaccination protocol for your best friend

1 Vaccination 5-in-1 is at 6 weeks	2 Vaccination 5-in-1 is at 9 weeks
4 Rabies vaccination is to be done between 1-3 months after the first Rabies vaccine	3 Vaccination 5-in-1 + 1st Rabies vaccination is at 12 weeks

FYI Many people think that this is it and there are no more vaccinations needed as an adult dog! THIS IS INCORRECT, BOOSTER VACCINATIONS AND RABIES (IN INDEMIC AREAS) ARE AN ANNUAL REQUIREMENT!

Plus, it is advisable to make use of a tick and flea treatment even in the winter months.

Your dog **MUST** be sterilised between 5-6 months of age - sterilisation helps to prevent unwanted pups and also keep them safe against other diseases and cancers.

Please keep a detailed booklet of all vaccinations. Please note that your dog is at risk of being taken away from you and destroyed if you cannot provide up-to-date records of vaccination.
